10. What method is used to specify a container's layout?
The `setLayout()` method is used to specify a container's layout.

11. Which containers use a `FlowLayout` as their default layout?
The `Panel` and `Applet` classes use the `FlowLayout` as their default layout.

12. What state does a thread enter when it terminates its processing?
When a thread terminates its processing, it enters the dead state.

13. What is the `Collections API`?
The `Collections API` is a set of classes and interfaces that support operations on collections of objects.

14. Which characters may be used as the second character of an identifier, but not as the first character of an identifier?
The digits 0 through 9 may not be used as the first character of an identifier but they may be used after the first character of an identifier.

15. What is the `List` interface?
The `List` interface provides support for ordered collections of objects.

16. How does Java handle integer overflows and underflows?
It uses those low order bytes of the result that cannot fit into the size of the type allowed by the operation.

17. What is the `Vector` class?
The `Vector` class provides the capability to implement a growable array of objects.

18. What modifiers may be used with an inner class that is a member of an outer class?
A (non-local) inner class may be declared as `public`, `protected`, `private`, `static`, `final`, or `abstract`.

19. What is an `Iterator` interface?
The `Iterator` interface is used to step through the elements of a `Collection`.

20. What is the difference between the `>>` and `>>>` operators?
The `>>` operator carries the sign bit when shifting right. The `>>>` zero-fills bits that have been shifted out.

21. Which method of the `Component` class is used to set the position and size of a component?
`setBounds()`

22. How many bits are used to represent Unicode, ASCII, UTF-16, and UTF-8
